

Fruit

Directions:

Write a program that declares six variables of type int named apples, oranges, peaches, grapes, bananas, and pineapples respectively.

Assign each variable with the following values:

Variable	Value
apples	35
oranges	22
peaches	18
grapes	10
bananas	8
pineapples	5

Then write the contents of each variable to the console window using the following format:

```
System.out.println("Mangos = " + mangos);
```

Sample Output:

```

          Totals
-----
Apples = 35
Oranges = 22
Peaches = 18
Grapes = 10
Bananas = 8
Pineapples = 5
```
